

Concept Painting Environmental Policy

Concept Painting Contractors Ltd offers a range of products which are manufactured to give the best environmental advantage to our customers.

We constantly update the materials we use to stay environmentally responsible.

As of 2008 the use of oil based paint is now redundant having being replaced by modern water based alternatives.

Our partner Dulux, provides environmental wash systems which turn paint washings into recyclable clear water and inert solid waste, and their new "light & Space" "LumiTec" paint system can save up to 20% on lighting energy bills by reflecting twice as much light.

The "light & Space" system can achieve the same level of illumination, despite using 22% less light energy. This is roughly equivalent to four rather than 5 60w filament bulbs.
